

Filming, Scanning, & Printing

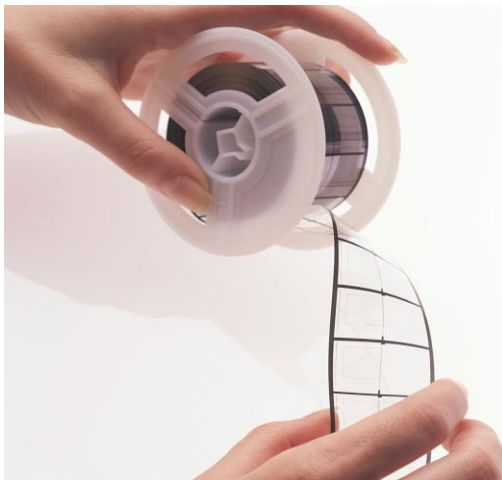

NMT Corporation offers a wide variety of film and paper services to provide you with the information access you require. From microfilming to scanning NMT provides solutions for all of your traditional media distribution needs.

Scanning Services

NMT Corporation can scan microfiche, microfilm and aperture cards, as well as paper documents from A to E size. Output data types include ITU Group 4 TIFF, Cals Type 1 and others. We visually inspect every image to make sure your drawings are reproduced as accurately as possible. We can also perform OCR/ICR scanning of text documents so that text may be extracted from scanned images.

Microform Reproduction

NMT is a leading supplier of silver halide and diazo source document microforms in 16mm, 35mm and 105mm format. Our high volume production facility is dedicated to producing high-quality microforms on schedule and at a reasonable price. NMT will expedite distribution of the product, saving you and your customers time and money. NMT also offers archival storage of your masters in an ANSI-standard temperature and humidity-controlled vault.

Demand Printing

NMT's commitment to service doesn't end once your drawings have been imaged. We also supply demand-printing services for both paper and electronic media. Your documents can be stored permanently and securely on our servers, and then immediately printed and shipped in response to requests by telephone, email, fax, or for a database of standing orders. Web-access systems can be created to provide you with 24-hour access to your online data. NMT also provides security and backup protection of your data.

Backfile Conversion

NMT can convert paper documents into more storage-friendly formats for you. We will scan the paper originals and store the images on CD in a file structure that can replicate your record-keeping system. This

decreases the amount of storage space needed for bulky paper documents and streamlines your record access at the same time. If you prefer to store your records in a microform format, we can deliver that as well. Either way, you regain valuable filing cabinets and shelves and decrease access time, while still preserving important records and materials.
